Indicators	Jan-June 2015	Jul-Dec 2015
% of pregnant women who reported for Antenatal Care < 20weeks	Red	Red
% of pregnant women who reported for Antenatal Care >=20weeks	Yellow	Yellow
% of pregnant women making at least 4 antenatal care visits according to standard	Yellow	Green
% of women who attended postnatal clinic visits >7 days delivery	Yellow	Yellow
% of pregnant women who received two doses of malaria intermittent preventive treatment	Red	Red
% of births attended by skilled attendant	Yellow	Yellow
% of HIV+ pregnant women on anti-retroviral therapy	Red	Red
% of newborns who do not present with neonatal tetanus	Green	Green
% of females aged 15 - 49 years using modern contraception	Red	Red
% of maternal deaths audited	Green	Green

The data shows good progress in the prevention of neonatal tetanus and improvement in antenatal and postnatal care. However,

MAMAYE ASKS YOU TO ENSURE INCREASE IN

- the coverage of malaria intermitent preventive therapy for pregnant women
- the coverage of anti-retroviral therapy for HIV+ pregnant women
- the uptake of modern contraception among women of reproductive age
- the number of pregnant women who report early for antenatal care services

Together, we are MamaYe!
